

## Content of Change the Drive Letter of a Volume.vbs ( Site 1 )

' Description: Changes the drive letter of volume D to Q. If you modify this script to change the drive letter of a volume other than D, note that the volume name in the WQL query must include both the colon (:) and the

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colVolumes = objWMIService.ExecQuery _
    ("Select * from Win32_Volume Where Name = 'D:\\'")

For Each objVolume in colVolumes
    objVolume.DriveLetter = "Q:"
    objVolume.Put_
Next
```
