

Content of Conduct a System Restore.vbs (Site 1)

' Description: Performs a system restore on a computer using system restore point No. 20. To perform a system restore using a different system restore point, simply change the value of the constant RESTORE_PO

```
Const RESTORE_POINT = 20
```

```
strComputer = "."
```

```
Set objWMIService = GetObject("winmgmts:"  
& "(impersonationLevel=impersonate)!\" & strComputer & "\root\default")
```

```
Set objItem = objWMIService.Get("SystemRestore")  
errResults = objItem.Restore(RESTORE_POINT)
```
