

## Content of Create a MultiString Value.vbs ( Site 1 )

' Description: Uses WMI to create a multi-string registry value in the HKLM\SOFTWARE\System Admin Scripting Guide portion of the registry.

```
Const HKEY_LOCAL_MACHINE = &H80000002
strComputer = "."
Set oReg=GetObject("winmgmts:{impersonationLevel=impersonate}!\\" & _
strComputer & "\root\default:StdRegProv")
strKeyPath = "SOFTWARE\System Admin Scripting Guide"
strValueName = "Multi String Value Name"
arrStringValue = Array("first string", "second string", _
"third string", "fourth string")
oReg.SetMultiStringValue HKEY_LOCAL_MACHINE,strKeyPath, _
strValueName,arrStringValue
```
