

Content of Create a Process on a Remote Computer.vbs (Site 1)

' Description: Starts Notepad.exe on a remote computer. On Windows XP and Windows Server 2003, Notepad will run in a hidden window.

```
strComputer = "webserv1"
Set objWMIService = GetObject _
    ("winmgmts:\\" & strComputer & "\root\cimv2:Win32_Process")
Error = objWMIService.Create("notepad.exe", null, null, intProcessID)
If Error = 0 Then
    Wscript.Echo "Notepad was started with a process ID of " & _
        & intProcessID & "."
Else
    Wscript.Echo "Notepad could not be started due to error " & _
        Error & "."
End If
```
