

Content of Dismount a Volume.vbs (Site 1)

' Description: Dismounts volume E from the file system. If you modify this script to dismount a different volume (such as X), note that your WQL query must specify the drive letter followed by a colon and then follow
The two parameters: 1) force the volume to be dismounted, even if users are currently connected to it; and, 2) place the volume in a no-automount, offline state. This script can be modified by setting either (or both)

```
strComputer = "."  
Set objWMIService = GetObject("winmgmts:"  
    & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")  
Set collItems = objWMIService.ExecQuery _  
    ("Select * From Win32_Volume Where Name = 'E:\'")  
For Each objItem in collItems  
    objItem.Dismount(True, True)  
Next
```
