

## Content of Format a Volume.vbs ( Site 1 )

' Description: Formats drive D using the NTFS file system. Drives could also be formatted using the FAT or FAT32 file systems. Note that this method cannot be used to format floppy drives. If you modify this script

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colVolumes = objWMIService.ExecQuery _
    ("Select * from Win32_Volume Where Name = 'D:\\'")

For Each objVolume in colVolumes
    errResult = objVolume.Format("NTFS")
Next
```
