

Content of Identifying Computer Chassis Type.vbs (Site 1)

' Description: Retrieves an integer value indicating the chassis type for a computer (mini-tower, laptop, etc.). The script does not include a description of each value that can be returned.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colChassis = objWMIService.ExecQuery _
("Select * from Win32_SystemEnclosure")

For Each objChassis in colChassis
  For i = Lbound(objChassis.ChassisTypes) to Ubound(objChassis.ChassisTypes)
    Wscript.Echo objChassis.ChassisTypes(i)
  Next
Next
```
