

## Content of List Authorized Applications in the Standard Profile.vbs ( Site 1 )

' Description: Lists all authorized applications for the Windows Firewall standard profile.

```
Set objFirewall = CreateObject("HNetCfg.FwMgr")
Set objPolicy = objFirewall.LocalPolicy
```

```
Set objProfile = objPolicy.GetProfileByType(1)
Set colApplications = objProfile.AuthorizedApplications
```

```
For Each objApplication in colApplications
  Wscript.Echo "Authorized application: " & objApplication.Name
  Wscript.Echo "Application enabled: " & objApplication.Enabled
  Wscript.Echo "Application IP version: " & objApplication.IPVersion
  Wscript.Echo "Application process image file name: " & _
    objApplication.ProcessImageFileName
  Wscript.Echo "Application remote addresses: " & _
    objApplication.RemoteAddresses
  Wscript.Echo "Application scope: " & objApplication.Scope
  Wscript.Echo
Next
```
