

## Content of List Recovery Configuration Options.vbs ( Site 1 )

' Description: Returns a list of settings that indicate the action to be taken by a computer should a stop event (blue screen) occur.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colRecoveryOptions = objWMIService.ExecQuery _
("Select * from Win32_OSRecoveryConfiguration")

For Each objOption in colRecoveryOptions
    Wscript.Echo "Auto reboot: " & objOption.AutoReboot
    Wscript.Echo "Debug File Path: " & objOption.DebugFilePath
    Wscript.Echo "Debug Info Type: " & objOption.DebugInfoType
    Wscript.Echo "Kernel Dump Only: " & objOption.KernelDumpOnly
    Wscript.Echo "Name: " & objOption.Name
    Wscript.Echo "Overwrite Existing Debug File: " & _
        objOption.OverwriteExistingDebugFile
    Wscript.Echo "Send Administrative Alert: " & objOption.SendAdminAlert
    Wscript.Echo "Write Debug Information: " & objOption.WriteDebugInfo
    Wscript.Echo "Write to System Log: " & objOption.WriteToSystemLog
Next
```
