

## Content of List Resultant Set of Policy Policy Settings.vbs ( Site 1 )

' Description: Returns information about policy object settings used in applying Group Policy to a computer. To return information about Group Policy applied to the logged-on user, change the WMI class from root\rsop\computer to root\rsop\user.

```
strComputer = "."
Set objWMIService = GetObject _
("winmgmts:\\" & strComputer & "\root\rsop\computer")

Set collItems = objWMIService.ExecQuery("Select * from RSOP_PolicySetting")

For Each objItem in collItems
    Wscript.Echo "GPO ID: " & objItem.GPOID
    Wscript.Echo "ID: " & objItem.ID
    Wscript.Echo "Precedence: " & objItem.Precedence
    Wscript.Echo "SOM ID: " & objItem.SOMID
    Wscript.Echo
Next
```
