

Content of List Service Data in a Spreadsheet.vbs (Site 1)

' Description: Demonstration script that retrieves information about each service running on a computer, and then displays that data in an Excel spreadsheet.

```
Set objExcel = CreateObject("Excel.Application")
objExcel.Visible = True
objExcel.Workbooks.Add
```

```
x = 1
strComputer = "."
Set objWMIService = GetObject _
("winmgmts:\\" & strComputer & "\root\cimv2")
Set colServices = objWMIService.ExecQuery _
("Select * From Win32_Service")
```

```
For Each objService in colServices
    objExcel.Cells(x, 1) = objService.Name
    objExcel.Cells(x, 2) = objService.State
    x = x + 1
Next
```
