

Content of List Service Status Changes as recorded in the System Event Log.vbs (Site 1)

' Description: Retrieves events from the System event log that have an event ID of 7036. These events are recorded any time a service changes status.

```
Set dtmConvertedDate = CreateObject("WbemScripting.SWbemDateTime")

strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")

Set colServiceEvents = objWMIService.ExecQuery _
    ("Select * from Win32_NTLogEvent Where Logfile = 'System' and " _
    & "EventCode = 7036")

For Each strEvent in colServiceEvents
    dtmConvertedDate.Value = strEvent.TimeWritten
    Wscript.Echo dtmConvertedDate.GetVarDate
    Wscript.Echo strEvent.Message
Next
```
