

## Content of List the User Logged on to a Remote Computer.vbs ( Site 1 )

' Description: Returns the user name of the user currently logged on to a remote computer. To use this script, replace atl-ws-01 with the name of the remote computer you want to check. Although this script will run

```
strComputer = "atl-ws-01"
Set objWMIService = GetObject("winmgmts:" _
    & "(impersonationLevel=impersonate)!\\\" & strComputer & "\root\cimv2")

Set colComputer = objWMIService.ExecQuery _
    ("Select * from Win32_ComputerSystem")

For Each objComputer in colComputer
    Wscript.Echo "Logged-on user: " & objComputer.UserName
Next
```
