

Content of Map a Network Share to a Local Folder.vbs (Site 1)

' Description: Uses a WMI Associators of query to return the local path of all the network shares on a computer.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" _
    & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colShares = objWMIService.ExecQuery _
    ("Associators of {Win32_Share.Name=Scripts} Where " _
    & "AssocClass=Win32_ShareToDirectory")

For Each objFolder in colShares
    Wscript.Echo objFolder.Name
Next
```
