

Content of Modify Recovery Configuration Options.vbs (Site 1)

' Description: Configures a computer to do a complete memory dump to the file C:\Scripts\memory.dmp should a stop event (blue screen) occur.

```
Const COMPLETE_MEMORY_DUMP = 1

strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")

Set colRecoveryOptions = objWMIService.ExecQuery _
    ("Select * from Win32_OSRecoveryConfiguration")

For Each objOption in colRecoveryOptions
    objOption.DebugInfoType = COMPLETE_MEMORY_DUMP
    objOption.DebugFilePath = "c:\scripts\memory.dmp"
    objOption.OverWriteExistingDebugFile = False
    objOption.Put_
Next
```
