

Content of Modify a Service Account Password.vbs (Site 1)

' Description: Changes the service account password for any services running under the hypothetical service account Netsvc.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")

Set colServiceList = objWMIService.ExecQuery _
    ("Select * from Win32_Service Where StartName = '.\netsvc'")

For Each objService in colServiceList
    errReturn = objService.Change( . . . . . , "password")
Next
```
