

## Content of Monitor Changes in Computer Power Status.vbs ( Site 1 )

' Description: Issues an alert if a computer changes power state (for example, enters or leaves suspend mode).

```
Set objWMIService = GetObject("winmgmts:" _  
& "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")  
Set colMonitoredEvents = objWMIService.ExecNotificationQuery _  
("Select * from Win32_PowerManagementEvent")
```

```
Do  
  Set strLatestEvent = colMonitoredEvents.NextEvent  
  Wscript.Echo strLatestEvent.EventType  
Loop
```
