

## Content of Monitor FRS Replication.vbs ( Site 1 )

' Description: Uses cooked performance counters to monitor File Replication Service performance on a domain controller.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colFRSSet = objWMIService.ExecQuery _
("Select * from Win32_PerfFormattedData_FileReplicaConn_FileReplicaConn")

For Each objFRSInstance in colFRSSet
    Wscript.Echo "Remote change orders received: " & _
objFRSInstance.RemoteChangeOrdersReceived
    Wscript.Echo "Remote change orders sent: " & _
objFRSInstance.RemoteChangeOrdersSent
    Wscript.Echo "Packets sent: " & objFRSInstance.PacketsSent
Next
```
