

Content of Monitor Print Queues.vbs (Site 1)

' Description: Uses cooked performance counters to return the number of jobs currently in each print queue on a computer.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")

Set colPrintQueues = objWMIService.ExecQuery _
("Select * from Win32_PerfFormattedData_Spooler_PrintQueue " & _
 "Where Name <> '_Total'")

For Each objPrintQueue in colPrintQueues
    Wscript.Echo "Name: " & objPrintQueue.Name
    Wscript.Echo "Current jobs: " & objPrintQueue.Jobs
Next
```
