

Content of Monitor Printer Status.vbs (Site 1)

' Description: Checks the status for each printer on a computer, and issues an alert if any of these printers have stopped.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" _
    & "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")

Set colInstalledPrinters = objWMIService.ExecQuery _
    ("Select * from Win32_Printer Where PrinterStatus = '1' " _
    & "or PrinterStatus = '2'")

If colInstalledPrinters.Count = 0 Then
    Wscript.Echo "All printers are functioning correctly."
Else
    For Each objPrinter in colInstalledPrinters
        Wscript.Echo "Printer " & objprinter.Name & " is not responding."
    Next
End If
```
