

## Content of Monitor Process Performance.vbs ( Site 1 )

' Description: Reports statistics such as thread count and working set size for all the processes running on a computer.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")
Set colProcessList = objWMIService.ExecQuery("Select * from Win32_Process")
For Each objProcess in colProcessList
    Wscript.Echo "Process: " & objProcess.Name
    Wscript.Echo "Process ID: " & objProcess.ProcessID
    Wscript.Echo "Thread Count: " & objProcess.ThreadCount
    Wscript.Echo "Page File Size: " & objProcess.PageFileUsage
    Wscript.Echo "Page Faults: " & objProcess.PageFaults
    Wscript.Echo "Working Set Size: " & objProcess.WorkingSetSize
Next
```
