

Content of Monitor the Print Service.vbs (Site 1)

' Description: Returns the status of the Spooler service (running, stopped, paused, etc.).

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:"
    & "(impersonationLevel=impersonate)!\" & strComputer & "\root\cimv2")

Set colRunningServices = objWMIService.ExecQuery
    ("Select * from Win32_Service Where Name = 'Spooler'")

For Each objService in colRunningServices
    Wscript.Echo objService.DisplayName & " -- " & objService.State
Next
```
