

Content of Move a Domain Controller to a New Active Directory Site.vbs (Site 1)

' Description: Moves a domain controller from one Active Directory site (strSourceSiteRDN) to another Active Directory site (strTargetSiteRDN).

```
strSourceSiteRDN = "cn=Default-First-Site-Name"
strTargetSiteRDN = "cn=Ga-Atl-Sales"
strDcRDN      = "cn=atl-dc-01"

Set objRootDSE = GetObject("LDAP://RootDSE")
strConfigurationNC = objRootDSE.Get("configurationNamingContext")

strDcPath = "LDAP://" & strDcRDN & ",cn=Servers," & strSourceSiteRDN & _
            ",cn=Sites," & strConfigurationNC

strTargetSitePath = "LDAP://cn=Servers," & strTargetSiteRDN & _
                   ",cn=Sites," & strConfigurationNC

Set objTargetSite = GetObject(strTargetSitePath)
objTargetSite.MoveHere strDcPath, strDcRDN
```
