

Content of Open Two Recordsets.vbs (Site 1)

' Description: Demonstration script that works with two separate recordsets.

```
Const adOpenStatic = 3  
Const adLockOptimistic = 3
```

```
Set objConnection = CreateObject("ADODB.Connection")  
Set objRecordSet = CreateObject("ADODB.Recordset")  
Set objRecordSet2 = CreateObject("ADODB.Recordset")
```

```
objConnection.Open _  
    "Provider=Microsoft.Jet.OLEDB.4.0; " & _  
    "Data Source=inventory.mdb"
```

```
objRecordSet.Open "SELECT * FROM GeneralProperties Where ComputerName = 'Computer1'", _  
    objConnection, adOpenStatic, adLockOptimistic
```

```
objRecordSet.MoveFirst
```

```
objRecordSet2.Open "SELECT * FROM Storage Where ComputerName = 'Computer1'", _  
    objConnection, adOpenStatic, adLockOptimistic
```

```
objRecordSet2.MoveFirst
```

```
Do Until objRecordset.EOF  
    Wscript.Echo objRecordset.Fields.Item("ComputerName")  
    Wscript.Echo objRecordset.Fields.Item("OSName")  
    objRecordSet.MoveNext  
Loop
```

```
Do Until objRecordset2.EOF  
    Wscript.Echo objRecordset2.Fields.Item("DriveName"), _  
    objRecordset2.Fields.Item("DriveDescription")  
    objRecordSet2.MoveNext  
Loop
```

```
objRecordSet.Close  
objRecordSet2.Close  
objConnection.Close
```
