

## Content of Ping Multiple Computers.vbs ( Site 1 )

' Description: Uses the Win32\_PingStatus class to ping four computers and identify any computers that could not be reached over the network. This script was contributed by Maxim Stepin of Microsoft.

```
strMachines = "atl-dc-01;atl-win2k-01;atl-nt4-01;atl-dc-02"  
aMachines = split(strMachines, ";")
```

```
For Each machine in aMachines  
  Set objPing = GetObject("winmgmts:{impersonationLevel=impersonate}")_.  
  ExecQuery("select * from Win32_PingStatus where address = " _  
    & machine & """)  
  For Each objStatus in objPing  
    If IsNull(objStatus.StatusCode) or objStatus.StatusCode<>0 Then  
      WScript.Echo("Computer " & machine & " is not reachable")  
    End If  
  Next  
Next
```
