

Content of Read String and DWORD Registry Values.vbs (Site 1)

' Description: Uses WMI to read a string and a DWORD registry value.

```
Const HKEY_CURRENT_USER = &H80000001  
Const HKEY_LOCAL_MACHINE = &H80000002
```

```
strComputer = "."
```

```
Set oReg=GetObject("winmgmts:{impersonationLevel=impersonate}!\\" & _  
strComputer & "\root\default:StdRegProv")
```

```
strKeyPath = "Console"  
strValueName = "HistoryBufferSize"  
oReg.GetDWORDValue HKEY_CURRENT_USER, strKeyPath, strValueName, dwValue  
Wscript.Echo "Current History Buffer Size: " & dwValue
```

```
strKeyPath = "SOFTWARE\Microsoft\Windows Script Host\Settings"  
strValueName = "TrustPolicy"  
oReg.GetStringValue HKEY_LOCAL_MACHINE, strKeyPath, strValueName, strValue  
Wscript.Echo "Current WSH Trust Policy Value: " & strValue
```
