

## Content of Read a MultiString Value.vbs ( Site 1 )

' Description: Uses WMI to read a multi-string registry value.

```
Const HKEY_LOCAL_MACHINE = &H80000002
```

```
strComputer = "."
```

```
Set oReg=GetObject("winmgmts:{impersonationLevel=impersonate}!\\" & _  
strComputer & "\root\default:StdRegProv")
```

```
strKeyPath = "SYSTEM\CurrentControlSet\Services\Eventlog\System"
```

```
strValueName = "Sources"
```

```
oReg.GetMultiStringValue HKEY_LOCAL_MACHINE, strKeyPath, _  
strValueName, arrValues
```

```
For Each strValue In arrValues
```

```
Wscript.Echo strValue
```

```
Next
```
