

## Content of Search Indexing Server Using a Predefined Query.vbs ( Site 1 )

' Description: Uses the predefined query #AllProps to return the file name, file size, and author of all the files included in the Indexing Service catalog Script Catalog on the local computer.

On Error Resume Next

```
Set objConnection = CreateObject("ADODB.Connection")
objConnection.ConnectionString = "provider=msidxs;"
objConnection.Properties("Data Source") = "Script Catalog"
objConnection.Open
```

```
Set objCommand = CreateObject("ADODB.Command")
```

```
strQuery = "Create View #AllProps as Select * from Scope()"
```

```
Set objRecordSet = objConnection.Execute("Select * from Extended_FileInfo")
```

```
Do While Not objRecordSet.EOF
  Wscript.Echo objRecordSet("Filename") & ", " & objRecordSet("Size") & _
    " " & objRecordSet("DocAuthor")
  objRecordSet.MoveNext
Loop
```
