

## Content of Start DNS Server Scavenging.vbs ( Site 1 )

' Description: Instructs a DNS server to begin scavenging stale records in the appropriate DNS zones.

```
strComputer = "."
Set objWMIService = GetObject("winmgmts:" _
    & "(impersonationLevel=impersonate)!\\" & strComputer & _
    "\root\MicrosoftDNS")

Set collItems = objWMIService.ExecQuery("Select * From MicrosoftDNS_Server")

For Each objItem in collItems
    objItem.StartScavenging()
Next
```
