

Content of Track Script Progress in a Command Window.vbs (Site 1)

' Description: Demonstrates the use of StdOut as a method for indicating the progress being made by a script.

```
Wscript.Echo "Processing information. This might take several minutes."
```

```
strComputer = "."  
Set objWMIService = GetObject("winmgmts:"  
    & "(impersonationLevel=impersonate)!\\" & strComputer & "\root\cimv2")
```

```
Set colServices = objWMIService.ExecQuery("Select * from Win32_Service")
```

```
For Each objService in colServices  
    Wscript.StdOut.WriteLine(".")  
Next
```

```
Wscript.StdOut.WriteLine  
Wscript.Echo "Service information processed."
```
