

Content of Use a Text File as a Command Line Argument.vbs (Site 1)

' Description: Demonstration script that allows you to drag a text file (consisting of server names) onto the script icon in Windows Explorer. The script then opens the text file, then retrieves service information from e

```
Const ForReading = 1
Set objArgs = WScript.Arguments

Set objDictionary = CreateObject("Scripting.Dictionary")
Set objFSO = CreateObject("Scripting.FileSystemObject")
Set objTextFile = objFSO.OpenTextFile(objArgs(0), ForReading)
i = 0

Do While objTextFile.AtEndOfStream <> True
    strNextLine = objTextFile.ReadLine
    objDictionary.Add i, strNextLine
    i = i + 1
Loop

For Each objItem in objDictionary
    Set colServices = GetObject("winmgmts://" & objDictionary.Item(objItem) _
        & "").ExecQuery("Select * from Win32_Service")
    Wscript.Echo colServices.Count
Next
```
